

## **Digital Transition in China: Linking Technological, Business and Social Dynamics**

Digital technological advancement is quickly changing our daily lifestyles, the industrial landscape and the global economy. In recent years, the rapid economic growth in large emerging economies like China has intensified the explosive demand for emerging information technologies and services, posing opportunities to whole IT circles to build efficient and flexible infrastructures for unprecedented hyper scale users. Digitalization trends including Big Data, 5G, cloud computing and AI are providing strong platforms for cross-sectoral resources integration, supporting business and social services alike. Digital changes have driven growth and innovation across key segments of China's society beyond just economic development.
